

'Ulu Harvesting Guideline

This guideline is intended to help co-op members properly identify, harvest, and handle mature breadfruit to meet required safety and quality standards. Fruit that does not meet these standards will be denied upon delivery or its volume deducted from the total harvest.

IDENTIFYING FRUIT MATURITY

There are many 'ulu varieties in Hawai'i today and their maturity indicators may vary. However, common varieties display similar qualities throughout their ripening process, as illustrated below. At this time, **we accept three grades of harvested fruit**, as detailed further down the page. We do not accept aborted or small immature fruits.

Developed flower

Small immature

Full-size immature

Fully mature

Ripe fruit

HARVESTING Please handle fruit with care when harvesting & packing!

Do not harvest fruit that has fallen onto the ground. When harvesting, avoid letting fruit hit the ground to prevent bruising. Deep lacerations are not acceptable. Ensure fruit is not cut by picker blade.

Bruised and lacerated fruit

Diseased fruit

Stem not clipped

STEM PROPERLY CLIPPED

GRADING & PRICING

Sort harvested fruit into three groups: **Grade A**, **Grade B**, and **Grade C**.

Grade A fruit is at least 5 inches in size and smooth all the way around. **Grade B** fruit is less than 5 inches in all directions, dimpled, or deformed. **Grade C** fruit is full-size immature ("green") fruit.

For **Grade A** 'ulu, the co-op pays \$1.30/lb.; for **Grade B** 'ulu, the co-op pays 90¢/lb.; & for **Grade C** 'ulu, the co-op pays 60¢/lb.

We only purchase 'ulu from co-op members. Grade B & C currently purchased on Hawai'i island only.

NEED HELP HARVESTING?

We have a network of trained harvesters we can connect you with!

Eligibility requirements:

- HUC member in good standing
- Trees must be harvestable (25 feet tall or less). Need a pruner? Contact us.
- Willing to split fruit payment 50/50 with harvester
- If you have LFA, must provide soapy water bath supplies for harvester's use on farm

POST-HARVEST PRACTICES

- Allow sap to drain from fruit immediately after harvesting by cutting stem close to base and laying fruit stem side down.
- Keep fruit cool! Harvest during cool temperatures, such as early in the morning, keep fruit out of sun, and/or use cooling techniques such as a water bath or air cooling (optimum storage conditions are 54 to 57°F).
- Wash fruit with potable water to remove field debris.
- Fruit must be free of pests. If your crops have Little Fire Ants (LFA), add ¼ tsp (1.25 ml) of liquid dishwashing detergent per gallon of water and completely submerge fruit for 15 minutes. Rinse thoroughly with potable water.
- Pack in ventilated sanitary or single use containers, and deliver to the co-op within 24 hours.

HARVESTING CRATES AVAILABLE FOR PURCHASE!

This low-cost “equipment share” is available for co-op members only, and enables you to conveniently drop off fruit in specialized harvesting crates and pick up containers in good condition, for your next harvest. Contact us for more information!

DROP-OFF SITES We aggregate 'ulu at these locations. Contact us for hours and directions!

West Hawai'i

Honalo Marshaling Yard
79-1017 East Honalo Rd, Kailua-Kona
(808) 322-3064
